Roof Protection Catalog

Chimneys

Chimneys are often left open, lined for a furnace or have caps on top that aren't sufficient to keep wildlife out. The shelter is a great spot for wildlife to take refuge and even birth their young

SWAT WILDLIFE

Chimney Entry Points

Furnace chimney protection for birds

Chimney protection with raccoon one way door

Chimney cap on terra cotta stack

Raccoon in open chimney

Exhausts

Things like bathroom fans, range hoods and dryers all need to exhaust outside of your house. The exhaust pipes are usually connected to the side of your house, but are also sometimes exhausted out of the roof.

SWAT WILDLIFE

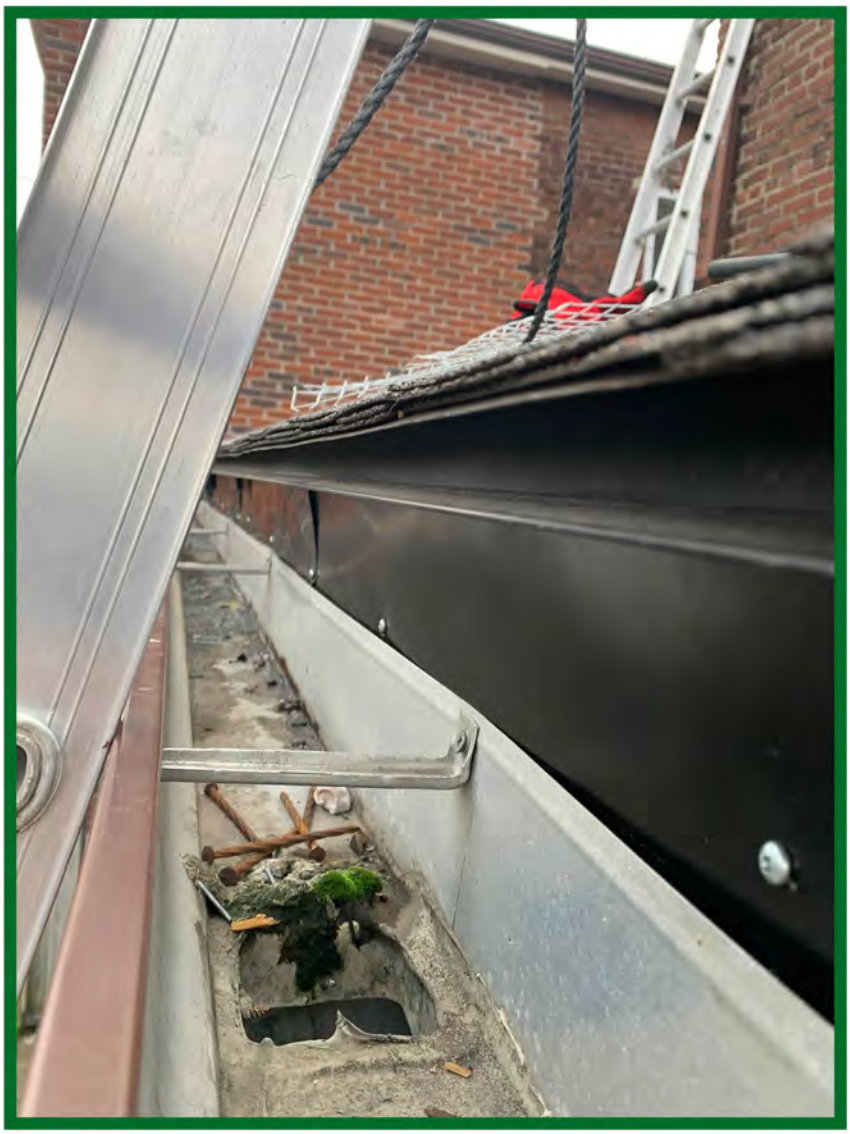
Exhaust Entry Points

Birds in side exhaust

Raccoon damage to roof exhaust

Birds nest in side exhaust

Squirrel damage to roof exhaust



Roofline/Fascia

The Fascia Board/Roofline is the wooden board that the eavestrough mount to. They also connect to the soffit/rafters which then lead to your attic. A gap is often present between the pitch of the roof and the fascia board, allowing easy entrance for wildlife. Exposed fascia also allows for easy chewing. The picture above shows a roofline protected with aluminium flashing.

Roofline Entry Points

Raccoon damage to roofline

Squirrel damage to roofline

Gap in roofline

Raccoon damage to roofline

SWAT WILDLIFE

Roof Vent

Roof vents are an attics main source of ventilation. Their purpose is to ensure your roof and attic is not compromised by an influx of heat and moisture.

SWAT WILDLIFE

Roof Vent Entry Points

Squirrel Damage to Plastic Vent

Raccon Damage to Plastic Vent

Raccoon Damage to Whirly Bird Vent

Raccoon Damage to Metal Vent

SWAT WILDLIFE

Plumbing Ventilation

Plumbing ventilation regulates the air pressure in your plumbing system, which allows your home to properly remove sewage and greywater from your property. The ventilation system passes through your walls and attic, and sticks out from a hole in your roof, which is covered with a plastic or rubber mat.

SWAT WILDLIFE

Plumbing vent entry points

Squirrel damage to top of plumbing vent

Raccoon damage to plumbing vent

Raccoon damage to plumbing vent

Raccoon damage to shingles surrounding plumbing vent

Soffits

Soffits are located where parts of your home have an overhang. This overhang typically contain your houses rafters that lead to your attic, and contribute to its ventilation. They are also used as aesthtics for your home.

SWAT WILDLIFE

Soffit Entry Points

Soffit intersection with stucco chewed by squirrel

Soffit intersection with squirrel damage

Protected soffit intersection

Soffit intersection with raccoon damage

Seasonal services

During the spring and summer, animals give birth and raise their young. During this season, animals can cause damage and contaminate your attic area. Our services address this by humanely removing the animals, with the option of cleaning and disinfecting the birthing area or entire attic

SWAT WILDLIFE

Attic remediation and baby removal

Raccoon babies in contaminated insulation

Attic prior to remediation

Attic during remediation

Attic after remediation
